DETAILED ACTION

Docketina

There has been a change in the Examiner prosecuting this case, please direct future telephone communications to the number listed at the end of this action.

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 5/11/2009 has been entered.

Specification

Claims 12-13 mentions "computer-readable medium", but does not accurately define the term in the Specifications. The Specification mentions computer-readable medium as unit in Fig. 4 and Spec Page 6 Ln 1-7, but this does not capture the metes and bound of the term.

Claim Rejections - 35 USC § 112

Claim 11 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The claim recites "a means for dividing...", "a

Art Unit: 2432

means for generating signature..."," a means for embedding..."; but fails to disclose the hardware elements that functions to carry out the steps. The closest disclosure of the recited means is found in Fig. 3 and Spec. Page 5 Ln 26-33, which shows blocks within a system, but this disclosure does not enumerate the hardware components used.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 12-13 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The claim recites computer-readable medium that is related to signal only see Spec. Page 6 Ln 1-7.

Claims 1-7 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The claim is method claim with no hardware components and not tied to particular machine see *Re Bilksi*.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section

Art Unit: 2432

351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 3-7 and 11-13 rejected under 35 U.S.C. 102(e) as being anticipated by US Patent Publication 2002/0157005 A1 to Brunk et al. (hereinafter Brunk).

Regarding Claim 1, 11,12, Brunk discloses dividing a whole image that contains at least one region of flat content into a plurality of regions. See Fig. 1 item 102;

generating a signature including generating signature bits from each of the plurality of regions including the at least one region of flat content. See Par. 0024;

embedding of said signature without subdividing the signature by spreading the signature bits of said signature across at least a portion of the image which is larger, than one of the regions, such that the signature bits from all regions can be extracted even if the at least one region of flat content has been replaced by tampering whereby the image is protected from tampering in the at least one region of flat content. See Par. 0025 & Par. 0020(where the watermarked signal is the signature that is embedded throughout the image).

Regarding Claim 3-7, Brunk discloses the signature being embedded in multiple areas and spread throughout the image. See Par. 0070 & Par. 0099.

Art Unit: 2432

Regarding Claim 13, Brunk discloses the many application where the embedding of signals is used. See Par. 0064-0065.
